SecureMe
by Real Data Technology MSP

What SecureMe is and how it protects you

Start here. Two minutes to read.

What SecureMe is

SecureMe is a lightweight security tool from Real Data Technology MSP. It stands between you and the scam: before a dangerous link opens, SecureMe checks where it really goes. If it is a trap, you see a clear warning instead of the fake page, and your security team is told.

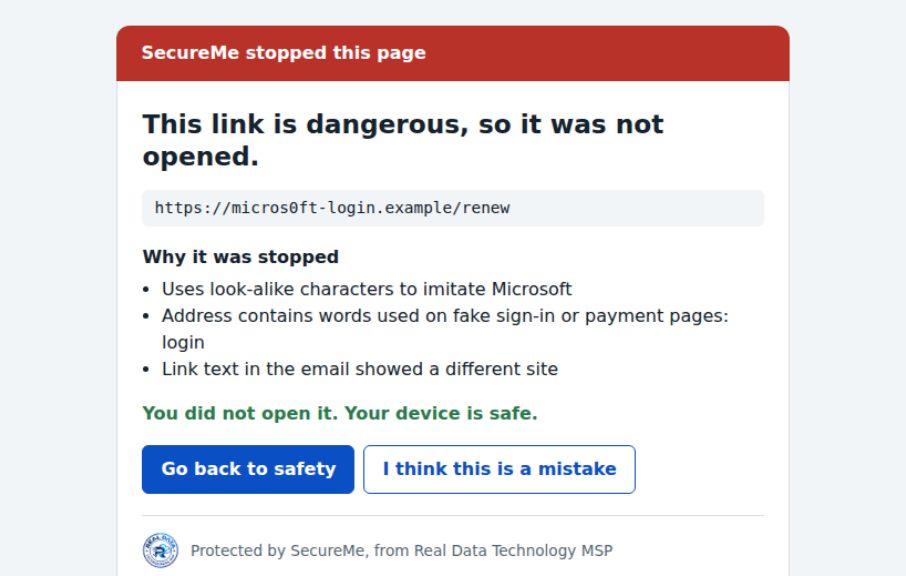

How it protects you

- **Scam and phishing links.** Every link you click is checked before it opens: in email, in WhatsApp Web and on any web page. A dangerous page is replaced by a red "SecureMe stopped this page" screen.
- **Fake sign-in pages.** If a page pretends to be Microsoft, Google or your bank and asks for your password, SecureMe warns you before you type it.
- **Phishing and payment-fraud email.** When your company connects Microsoft 365 or Google Workspace, incoming mail is checked for fake senders, look-alike domains and "urgent payment" tricks.
- **Blocked sites on the whole computer.** The agent blocks the sites on your company's block list for every program, not only the browser.
- **Your security team behind you.** Every stop is recorded with the reasons. If a computer is at risk it can be cut off from the network in one click, and released again.

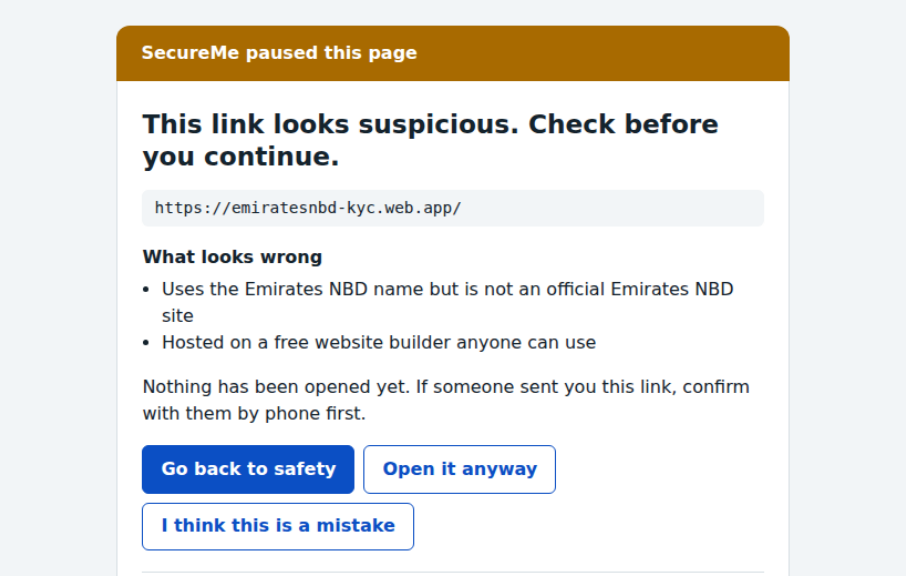

What SecureMe does not do

- It **does not read** your emails, chats or WhatsApp conversations, and it never records what you type. It only sees the address of the link you click.
- It does not scan your disk in the background or slow your computer: the agent uses about 10 MB of memory.
- No security tool stops everything. If a message asks for money, a code or a password, confirm with the sender by phone, even if SecureMe shows no warning.

What you see when SecureMe stops something

A dangerous link: the page is not opened. "Go back to safety" returns you to where you were. "I think this is a mistake" asks your security team to review it.

A suspicious link: SecureMe pauses and explains what looks wrong. You can go back, or open it if you are sure.

Which download do I need?

You have	Download	Guide (also inside the zip)
A Windows PC or server	SecureMe-1.0.6-Windows.zip SecureMe-1.0.6-Browser-Guard.zip	SecureMe-Guide-Windows.pdf SecureMe-Guide-Browser-Guard.pdf
A Mac	SecureMe-1.0.6-macOS.zip SecureMe-1.0.6-Browser-Guard.zip	SecureMe-Guide-macOS.pdf SecureMe-Guide-Browser-Guard.pdf
A Linux computer or server	SecureMe-1.0.6-Linux.zip (and the browser guard zip on desktops)	SecureMe-Guide-Linux.pdf
A phone	The message checker (nothing to install from a store)	SecureMe-Guide-Phone.pdf

Free trial and licence

A company can start a **free trial** at https://secureme.realdatatech.ae/signup (2 months for up to 50 computers, 3 months for more than 50), and one person can start a free month at https://secureme.realdatatech.ae/personal: you receive an install link for your computers, and the SecureMe security team at Real Data Technology MSP monitors them for you and sends you reports. To stay protected after the trial and keep receiving updates, contact **support@realdatatech.ae**. SecureMe is a yearly subscription priced per device: the larger the company, the lower the price per device. Advanced Protection (+AED 30 per computer per year, free during trials) adds antivirus managed by SecureMe: scans after start-up and every day, new downloads checked at once, threats removed or quarantined automatically and reported to our team. When a free trial ends, protection is paused that day; SecureMe stays installed and switches back on by itself as soon as your licence is activated, with nothing to install again. If a paid subscription is not renewed, protection continues for a 30-day grace period and is then paused in the same way.

The agent protects the whole computer and lets your security team look after it. **The browser guard** checks links before they open and shows the warning screens. Install both for full protection.

Each zip contains the installer, the programs and its guide. All downloads are at **https://secureme.realdatatech.ae**

Help and emergencies

In an emergency (a password typed into a fake page, a payment made to a fraudster, a computer behaving strangely): in the browser guard click **Emergency: get help now**. It goes to the top of the SecureMe security team's screen.

For anything else, email **support@realdatatech.ae** or use **Contact support** at the bottom right of https://secureme.realdatatech.ae. If a step fails, copy the exact message you see and include it.
